

Reitigh

IntegraLynx

**Your Pathway to CSRD
Compliance**

Reitigh Background

In a rapidly changing financial landscape, adaptability and efficiency are drivers of success. Reitigh is an actuarial software company that specialises in delivering innovative solutions to the financial service industry. Our unique approach combines flexible software with a team of industry domain experts, enabling our clients to navigate the complex world of financial services with agility and speed. Our software, IntegraLynx, is currently used by numerous blue-chip financial services organisations to carry out end-to-end regulatory and financial reporting on topics including, PRIIPs, Solvency II, MiFID II, IDD, CTI and more.

Sustainability Reporting

EU Directive 2022/2464, Corporate Sustainability Reporting Directive (CSRD), brings an onerous reporting challenge to financial service entities. Solving the data challenges are at the heart of achieving CSRD compliance. IntegraLynx is specifically designed for the financial services sector, addressing the unique challenges posed by the CSRD requirements for financial services organisations. Offering a comprehensive, automated solution tailored for insurers, funds, and banks, IntegraLynx manages the intricate demands of sustainability reporting and governance and auditability of the data backing the reporting.

CSRD represents a significant shift towards integrating environmental, social, and governance (ESG) considerations into the core of annual reporting. With the directive emphasising a dual materiality perspective, organisations are now mandated to disclose not only how sustainability risks and opportunities impact them but also their effect on society and the environment. This shift necessitates a level of data accuracy, consistency, and auditability on par with financial reporting, transforming how companies approach their annual reporting processes.

IntegraLynx

Recognising the specific implications for the financial sector, Reitigh's IntegraLynx is engineered to tackle the unique obstacles faced by insurers, funds, and banks. By focusing exclusively on financial services, IntegraLynx provides a more nuanced and effective approach to CSRD compliance, addressing the sector-specific challenges and dynamics.

Comprehensive Data Integration

Reitigh has established direct links to gather ESG data from a wide variety of asset managers. IntegraLynx also connects to leading market data providers to gather ESG data. IntegraLynx will automatically combine this with data from fund accounting systems to calculate a look-through view of ESG data through the supply chain.

Proprietary Questionnaire Software

IntegraLynx produces questionnaires for counterparties that do not publish ESG information. This includes strong validation around the answers provided by counterparties to ensure data consistency. There are automatic reminders and escalations where IntegraLynx tracks which counterparties have responded.

Advanced Internal Policies Analysis

By leveraging Large Language Models (LLMs), IntegraLynx analyses internal policies and procedures to extract and format required disclosures under ESRS, highlighting inconsistencies and facilitating a swift remediation process.

End-to-End Automation

From data gathering and validation to populating ESRS templates, IntegraLynx automates the workflow, allowing for data consumption in its native format without the need for pre-formatting data prior to ingestion.

Reitigh's commitment to the financial services sector is unwavering. With IntegraLynx, we not only offer a solution but a partnership. Our team of industry domain experts, combined with our flexible software, positions us uniquely to support financial institutions in navigating the complexities of CSRD compliance.

Embrace the future of sustainability reporting with confidence. Choose IntegraLynx by Reitigh, where innovation meets expertise to deliver compliance solutions tailored for the financial services sector.
